ServiceNow Administrator

Access Control for Project table

NAME :Karpagam N

Register.No :723621104020

Year : IV

Semester : 07

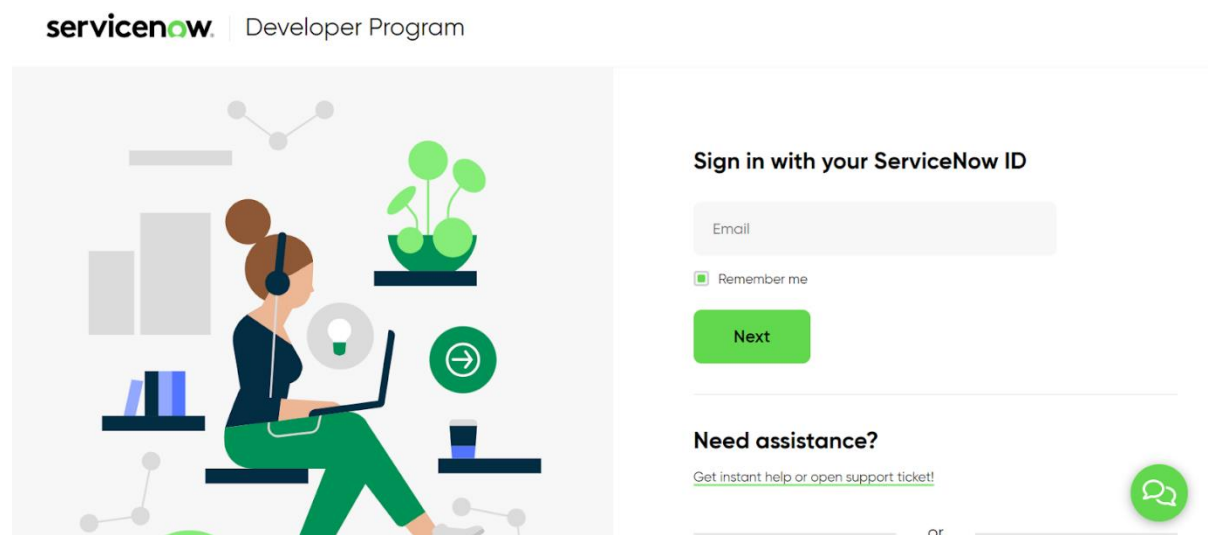

Access control for Project Table

Abstraction:

- **Access Control for the Project table in ServiceNow involves configuring security mechanisms that govern who can view, create, modify, or delete records within the Project table.**
- **By defining Access Control Rules (ACLs), administrators ensure that sensitive project data is only accessible to authorized users based on roles, permissions, or specific conditions.**
- **These access controls help enforce organizational policies, maintain data privacy, and support compliance requirements. Through appropriate ACL configurations, the system can differentiate between various user groups—such as project managers, team members, and executives—and grant them the right level of access to project-related information.**

Instructions:

Step 1 :Sign in to ServiceNow.

Step 2 :Sign up for a developer account on the ServiceNow Developer site
[“https://developer.servicenow.com”](https://developer.servicenow.com).

Step 3 :Once logged in, navigate to the "Personal Developer Instance" section.

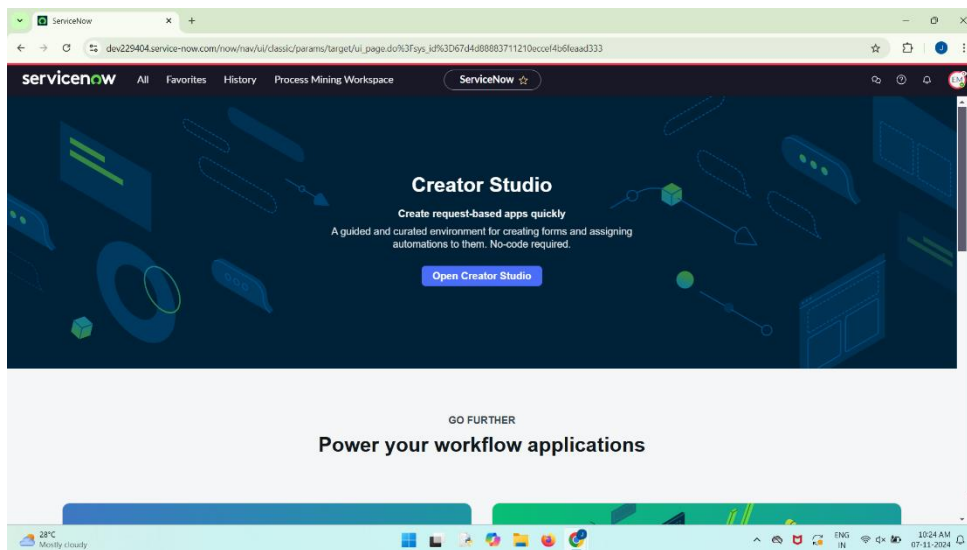

Click on "Request Instance" to create a new ServiceNow instance.

Step 4 :Fill out the required information and submit the request.

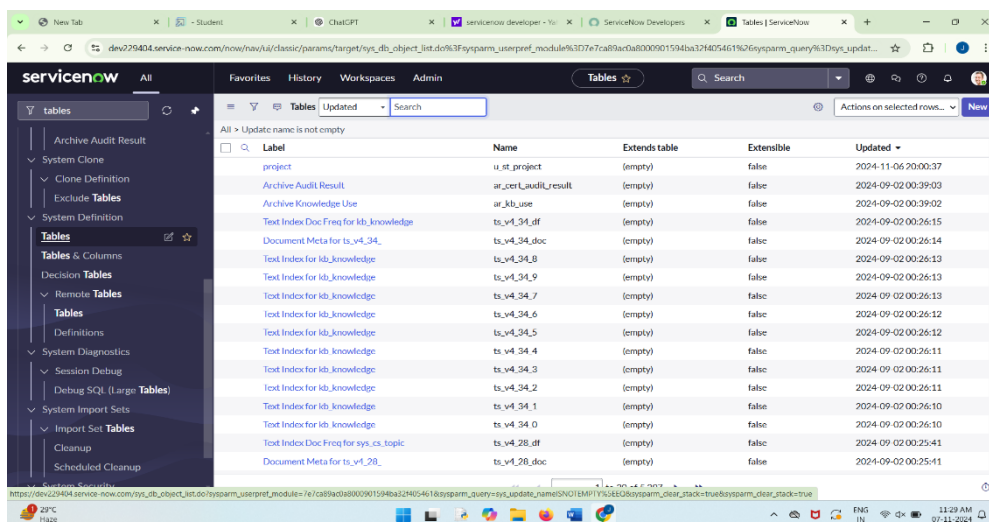

Step 5 :You'll receive an email with the instance details once it's ready.

Step 6 :Log in to your ServiceNow instance using the provided credentials.

Now you will navigate to the ServiceNow.

Step 7 : Open “Tables” >> New.

Step 8 :Fill the details of the table with fields as below >> Save.

Creating a remote table that utilizes data from an external (outside ServiceNow) source requires an IntegrationHub entitlement and consumes IntegrationHub transactions.

* Label: Project
* Name: u_st_project

Application: Global
Remote Table: ☒
Create module: ☒
Add module to menu: -- Create new --
New menu name: Project

Table Columns for text

Column label	Type	Reference	Max length	Default value	Display
Name	String		100		false
Project Overview	String		200		false
Budget	Price				false
Total Expenses	Price				false

Step 9 :Open User >> New.

Step 10 :Create Two Users Product Manager and Employee Management.

User ID	Name	Email	Active
Search	Search	Search	Search
Employee Management	Employee Management		true
Product Management	Product Management		true
Sandeep Gujja	Sandeep Gujja	sandeepgujja999@gmail.com	true
admin	System Administrator	admin@example.com	true
MishraSri	Mishra Sri	Mishra6@gmail.com	true

Step 11 :Open Role >>New

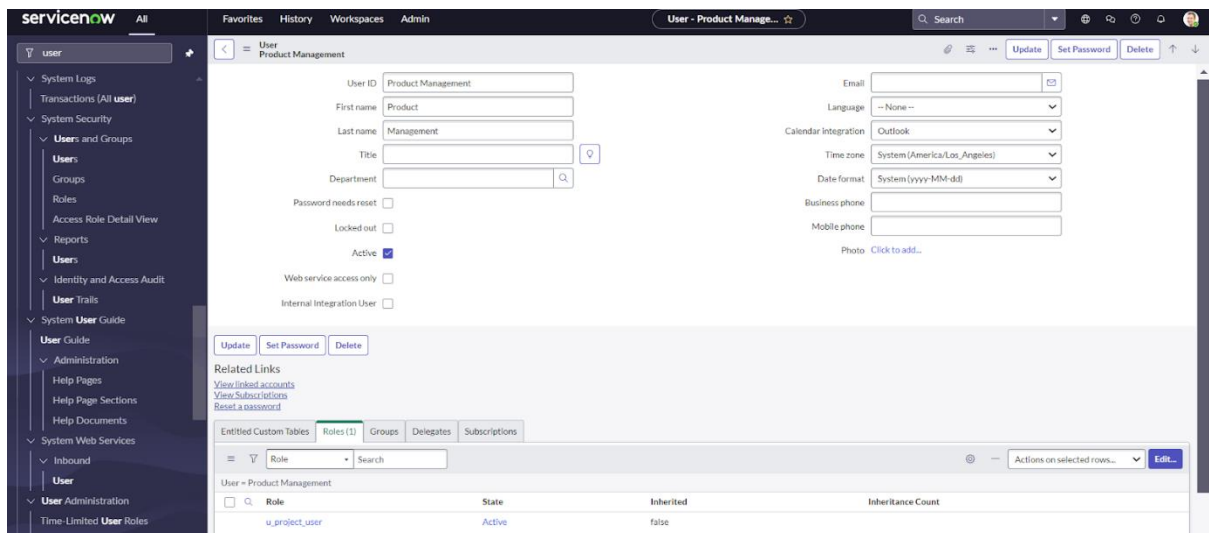

The screenshot shows the ServiceNow 'Roles' page. The left sidebar contains a navigation menu with 'Roles' selected. The main area displays a table of roles with columns for Name, Description, and Elevated privilege. The 'action_category_creator' role is highlighted.

Name	Description	Elevated privilege
action_category_creator	Allows creation of action and subflow categories.	false
action_designer	action designer role enables users to launch Action Designer	false
activity_admin	Can create, edit, publish or delete wf_element_provider	false
activity_creator	This role give workflow users the ability to create custom orchestration activities in the workflow canvas.	false
actsub_admin	Activity Subscriptions Administrator role	false
actsub_user	Activity Subscriptions User role	false
admin	The System Administrator role. This role has access to all system features, functions, and data, regardless of security constraints. "Grant this privilege carefully." If you have sensitive information, such as HR records, that you need to protect, you must create a custom "admin" role for that area and train a person authorized to see those records to act as the administrator	false
agent_admin	Can download and administer the system's built-in agent	false
agent_security_admin	Manages security of the MID Server.	false
agent_workspace_user	Users of the Agent Workspace application. may navigate to the URI for that application	false

Step 10 :Create Employee Role.

Step 11 :Go to the Project table >> Controls >> copy the role name from the table.

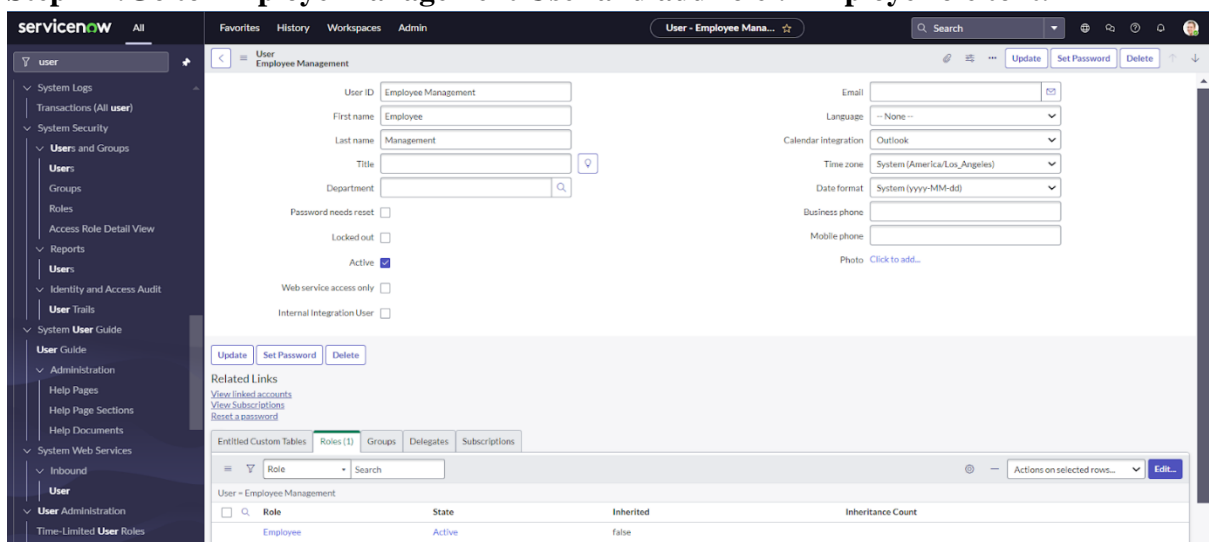

Go to Product Management User and add role :u_project_user to it.

The screenshot shows the 'User - Product Management' form in ServiceNow. The form includes fields for User ID, First name, Last name, Title, Department, Password needs reset, Locked out, Active, Web service access only, Internal Integration User, Email, Language, Calendar integration, Time zone, Date format, Business phone, and Mobile phone. The 'Active' checkbox is checked. Below the form, there is a 'Related Links' section and a table for 'Entitled Custom Tables'.

Role	State	Inherited	Inheritance Count
u_project_user	Active	false	

Step 12 :Go to Employee Management User and add role : Employee role to it.

The screenshot shows the 'User - Employee Management' form in ServiceNow. The form includes fields for User ID, First name, Last name, Title, Department, Password needs reset, Locked out, Active, Web service access only, Internal Integration User, Email, Language, Calendar integration, Time zone, Date format, Business phone, and Mobile phone. The 'Active' checkbox is checked. Below the form, there is a 'Related Links' section and a table for 'Entitled Custom Tables'.

Role	State	Inherited	Inheritance Count
Employee	Active	false	

Step 13 :Click on the Profile avatar >> Elevate Role >> Grant the high security

The screenshot shows the ServiceNow 'Access Controls' page. On the left, a sidebar lists various configuration categories, including 'Access Control (ACL)'. The main area displays a table of access control records. On the right, a user profile for 'System Administrator' is visible, with a menu that includes 'Elevate role'.

Name	Operation	Type	Active	Updated by
u_st_project	read	record	true	admin
u_st_project	write	record	true	admin
u_st_project	delete	record	true	admin
u_st_project	create	record	true	admin
u_project	write	record	true	admin
u_project	create	record	true	admin
u_project	delete	record	true	admin
u_project	read	record	true	admin
u_product	write	record	true	admin
u_product	read	record	true	admin
u_product	delete	record	true	admin
u_product	create	record	true	admin
u_overview	write	record	true	admin
u_overview	delete	record	true	admin

Step 14 :Search& Open ACL >> New.

The screenshot shows the ServiceNow 'Access Controls' page with search filters applied. The table lists various access control records, including those for 'u_project', 'u_product', 'u_overview', and 'x_1346917_educat_0_admission_entries'.

Name	Operation	Type	Active	Updated by	Updated
u_project	write	record	true	admin	2024-05-22 23:16:31
u_project	create	record	true	admin	2024-05-22 23:16:31
u_project	delete	record	true	admin	2024-05-22 23:16:31
u_project	read	record	true	admin	2024-05-22 23:16:31
u_product	write	record	true	admin	2024-05-22 23:00:06
u_product	read	record	true	admin	2024-05-22 23:00:06
u_product	delete	record	true	admin	2024-05-22 23:00:06
u_product	create	record	true	admin	2024-05-22 23:00:05
u_overview	write	record	true	admin	2024-05-21 21:33:03
u_overview	delete	record	true	admin	2024-05-21 21:33:03
u_overview	read	record	true	admin	2024-05-21 21:33:03
u_overview	create	record	true	admin	2024-05-21 21:33:02
x_1346917_educat_0_admission_entries	read	record	true	admin	2024-04-03 22:02:21
x_1346917_educat_0_admission_entries	create	record	true	admin	2024-04-03 22:02:21
x_1346917_educat_0_admission_entries	delete	record	true	admin	2024-04-03 22:02:21
x_1346917_educat_0_admission_entries	delete	record	true	admin	2024-04-03 22:02:21

Step 15 :Fill the details below andCreate Read Operation Table Level ACL(none) on Employee role >> Save.

The screenshot shows the 'Access Control' configuration form for 'u_project'. The form includes fields for 'Type' (record), 'Operation' (read), 'Application' (Global), 'Active' (checked), and 'Advanced' (unchecked). The 'Protection policy' is set to 'None'. The 'Name' is 'project [u_project]' and the 'Description' is empty. The 'Condition' is '3 records match condition'. The 'Conditions' section shows a table with 'Role' and 'Employee' listed. The 'Local or Existing' section is set to 'Existing' and 'Local'. The 'Condition' is 'All of these conditions must be met'.

* Type: record

* Operation: read

Application: Global

Active: ☒

Advanced: ☐

Admin overrides: ☒

Protection policy: -- None --

* Name: project [u_project]

Description:

Condition: 3 records match condition

Add Filter Condition Add "OR" Clause

-- choose field -- -- oper -- -- value --

Conditions

Requires role

Role
Employee

Local or Existing: ☐ Existing ☒ Local

Condition: All of these conditions must be met

-- choose field -- -- value --

Step 16 :New >> Fill the details below and Create Read Operation Field Level ACL(Budget) on role: u_project_user>> Save.

Warning: Empty ACLs potentially allows for unauthenticated access. A Role, Security Attribute or Script must be specified to properly secure access with this ACL.

* Type: record Application: Global

* Operation: read Active: ☒

Admin overrides: ☒ Advanced: ☐

Protection policy: -- None --

* Name: project [u_project] Budget

Description:

Condition: 3 records match condition

Add Filter Condition Add "OR" Clause

-- choose field -- -- oper -- -- value --

Conditions

Requires role

Role
u_project_user

Insert a new row...

Step 17 :New>> Fill the details below and Create Read Operation Field Level ACL(Total Expenses) on role: u_project_user>> Save.

Warning: Empty ACLs allow unauthenticated access. A Role, Security Attribute or Script must be specified to properly secure access with this ACL.

* Type: record Application: Global

* Operation: read Active: ☒

Admin overrides: ☒ Advanced: ☐

Protection policy: -- None --

* Name: project [u_project] Total Expenses

Description:

Condition: 3 records match condition

Add Filter Condition Add "OR" Clause

-- choose field -- -- oper -- -- value --

Conditions

Requires role

Role
u_project_user

Insert a new row...

Local or Existing Existing Local

Step 18 :Impersonate User >> Product Management.

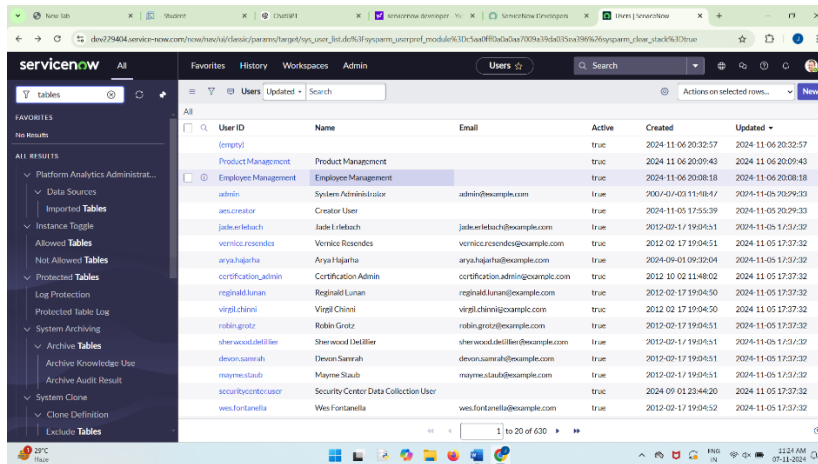

Step 19 :All>> Project >> New(We can see that the product Manager has all the CRWD access).

Step 20 :Create 3 Records with any details .

Name	Budget	Project Overview	Total Expenses
Ajay	\$330.00	data integration	\$1,000,000.00
Sandeep	\$220.00	Data specilizer	\$1,000,000.00
Meghana	\$100.00	Data Analyst	\$1,000,000.00

ScreenShots:

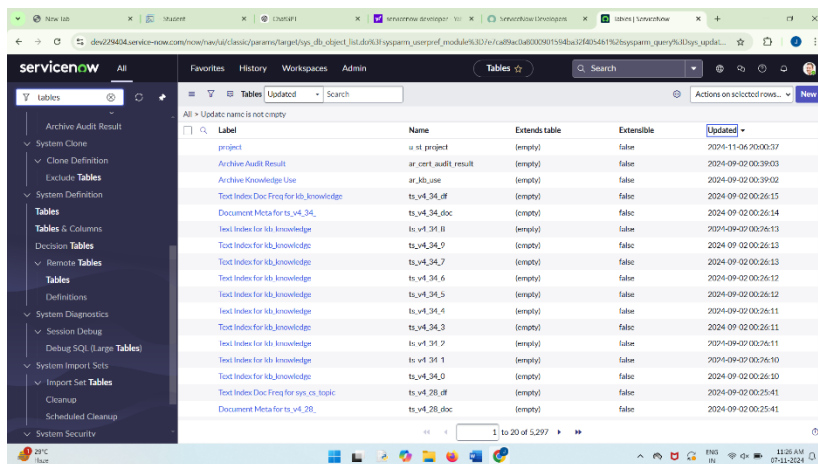

Pic 1:

This screenshot shows the 'Users' table in the ServiceNow application. The table lists various system and user accounts, including Product Management, Employee Management, System Administrator, and several individual users like Jade E. Leusch, Verónica Ríos, and Wes Fontanella. The table has columns for User ID, Name, Email, Active status, Created date, and Updated date.

User ID	Name	Email	Active	Created	Updated

Conclusion:

In conclusion, effective Access Control for the Project table in ServiceNow is crucial for protecting sensitive data and ensuring that only authorized users can access project records. By setting up and managing Access Control Rules (ACLs), organizations can maintain security, promote collaboration, and comply with policies. Properly configured access controls enhance project oversight, boost productivity, and minimize security risks.
